

Aarya Arban

T11 – 05

Assignment No. 9

Weka (Waikato Environment for Knowledge Analysis) is a popular, open-source data mining and machine learning software developed at the University of Waikato in New Zealand. It is written in Java and provides a collection of visualization tools and algorithms for data analysis and predictive modeling, along with graphical user interfaces for easy access to these functions.

How Weka is Used in Data Mining

Weka is widely used in data mining tasks such as:

1. Data Preprocessing

- Cleaning data, removing duplicates, normalization, etc.
- Supports different data formats like CSV and ARFF.

2. Classification

- Apply machine learning algorithms like Decision Trees (J48), Naive Bayes, k-NN, SVM, etc.

3. Clustering

- Group similar instances using algorithms like k-Means, DBSCAN, etc.

4. Association Rule Mining

- Discover interesting relations using algorithms like Apriori.

5. Regression

- Perform linear and non-linear regression analysis.

6. Visualization

- Visualize datasets, decision trees, clusters, and evaluation metrics.

7. Evaluation

- Cross-validation, confusion matrix, ROC curves, and other performance metrics.

Comparison of Weka and Other Data Mining Tools

1. Weka

- **Language:** Java
 - **Interface:** GUI + Command Line
 - **Ease of Use:** Very beginner-friendly
 - **Best For:** Education, prototyping ML models
 - **Features:** Classification, clustering, association, regression, visualization
 - **Limitation:** Not ideal for big data or deep learning
-

2. RapidMiner

- **Language:** Java
 - **Interface:** GUI-based drag-and-drop
 - **Ease of Use:** Very user-friendly, no coding required
 - **Best For:** Business analytics, fast prototyping
 - **Features:** ML, data prep, visualization, deployment
 - **Limitation:** Limited free version, commercial license for full features
-

3. KNIME

- **Language:** Java
- **Interface:** Visual workflow GUI
- **Ease of Use:** Easy to learn for non-programmers
- **Best For:** Data integration + machine learning
- **Features:** Data cleaning, analytics, reporting, ML
- **Limitation:** Limited advanced deep learning capabilities out-of-the-box

4. Orange

- **Language:** Python
- **Interface:** GUI + Python scripting
- **Ease of Use:** Highly intuitive visual programming
- **Best For:** Education, visual data exploration
- **Features:** Classification, clustering, text mining, visualization
- **Limitation:** Less support for big data or complex pipelines

5. R / RStudio

- **Language:** R
- **Interface:** Code-based (IDE)
- **Ease of Use:** Steeper learning curve
- **Best For:** Statistical analysis, academic research
- **Features:** Extensive ML packages, data visualization
- **Limitation:** Needs programming knowledge

6. Python (Scikit-learn, Pandas, TensorFlow, etc.)

- **Language:** Python
- **Interface:** Code-based (Jupyter, IDE)
- **Ease of Use:** Great for programmers
- **Best For:** Custom ML workflows, scalability
- **Features:** ML, DL, big data, visualization, automation
- **Limitation:** Requires coding and understanding of ML concepts

7. SAS Enterprise Miner

- **Language:** SAS
 - **Interface:** GUI
 - **Ease of Use:** Designed for business users
 - **Best For:** Enterprise-level analytics
 - **Features:** Predictive modeling, data prep, scoring
 - **Limitation:** Expensive, limited to SAS ecosystem
-

8. IBM SPSS Modeler

- **Language:** Proprietary (IBM)
 - **Interface:** GUI
 - **Ease of Use:** Drag-and-drop interface
 - **Best For:** Marketing, finance, CRM analytics
 - **Features:** Advanced analytics, ML, data prep
 - **Limitation:** Commercial license required
-

9. H2O.ai

- **Language:** Java, R, Python APIs
- **Interface:** GUI + Code (Flow, Python, R)
- **Ease of Use:** Developer and enterprise friendly
- **Best For:** Scalable machine learning and AI
- **Features:** AutoML, big data support, cloud-native
- **Limitation:** Complex for beginners

Implementation of Classification Algorithm (Naïve Bayes) in WEKA:

The screenshot shows the WEKA Explorer interface. The 'Current relation' is 'Buy_Computer' with 14 instances. The 'Attributes' list includes 'id', 'age', 'income', 'student', 'credit_rating', and 'Buy_Computer'. The 'Selected attribute' is 'Buy_Computer' with 2 distinct values: 'no' (count 5) and 'yes' (count 9). A bar chart visualization is shown with a blue bar for 'no' and a red bar for 'yes'.

No.	Label	Count	Weight
1	no	5	5
2	yes	9	9

Output:

The screenshot shows the WEKA Explorer interface with the 'NaiveBayes' classifier selected. The 'Test options' are set to 'Percentage split' at 70%. The 'Classifier output' shows the following information:

```
=== Run information ===
Scheme: weka.classifiers.bayes.NaiveBayes
Relation: Buy_Computer
Instances: 14
Attributes: 6
id
age
income
student
credit_rating
Buy_Computer
Test mode: split 70.0% train, remainder test
