Assignment No. 3

Aim: Study and develop a user interactive form with suitable validation

Theory:

In Flutter, button click events are handled using the `onPressed` callback. When a button (such as `ElevatedButton`, `TextButton`, or `OutlinedButton`) is pressed, the function assigned to its `onPressed` property is executed. This function contains the logic you want to run when the button is clicked. If `onPressed` is set to null, the button becomes disabled and cannot be interacted with. For state changes during a button click, `setState()` is typically used to update the UI.

Sample App

LoginForm

Sign in

User Name (Email)

ahddnhidhwe

Please enter a valid email address

Password (Min. 8 characters)

Password must be at least 8 characters long

☐ Forgot Password

Login

Sample App

LoginForm

Sign in

User Name (Email)

gugeuwdgeu@gsufdhi.com

Password (Min. 8 characters)

☐ Forgot Password

Login

Conclusion: This assignment helped me understand the importance of creating user-interactive forms with proper input validation in application development. By implementing form fields and applying suitable validation techniques, I ensured data integrity and improved the overall user experience. The hands-on practice strengthened my skills in managing form state, handling user input, and providing real-time feedback, which are essential for building reliable and user-friendly applications.
